

With most modern sensors-scanners for LiDAR and Photogrammetric applications.

- Extraction of Digital Terrain Model (DTM) & Digital Surface Model (DSM). Contour models and TINs
- Classification of Bare Earth and above ground features. Mass and Volume Calculations
- 3-D Feature extraction e.g. Buildings, Power lines
- Forestry Resource Maps, Agriculture and Vegetation mapping.
- RGB images for enhanced classification and orthomap creation.
- Disaster management e.g. Flood mapping.
